

# Submission 07

May 2017

## **Team Mango Members**

John Drakos

Yixiang Xu

Michael Feuerstein

Yi Fung

Bryce Bodley-Gomes

Ryan Semple

## Cut Features:

**Submission Form:** The sell item page had the “course-related” input sections removed. Adding an item to a course is now done by the admin, not by the seller.

## Bugs:

**Classpage:** No current bugs. “Schedule” and “Other Info” tabs are not in use.

**Submission Form:** Not a bug - Currently when uploading an image for submission the size must be under 100kb. Otherwise mongodb does not actually accept the new item.

**Search Page:** If an item is assigned to multiple categories, it will not show up when searched for.

## Special Instructions to Run

\$ npm install history@2.0

When searching: a full term is required to search. For example if searching for “Introduction to Algorithms”, you can search on: Introduction or Algorithms.

Latest stable build is on master.

Latest Beta build is on mike-branch. It contains new class based features for selling in submission and searching for class items form class pages.

## Responsibilities

**Bryce Bodley-Gomes:** Swapped out all ID's for MongoDB's and created server/src/ResetDatabase.js, Made the homepage pull from Mongo's Database. Worked to debug search issues. Helped compose the submission document. Pair programmed to solve submission form ID's for selling list.

**Ryan Semple:** Made all necessary changes to functions and routes for sell item page in order for it to push to Mongo database. Helped compose submission report.

**John Drakos:** Made all necessary changes to functions and routes for item page in order for it to pull from the Mongo database. Helped compose submission report.

**Yixiang Xu:** Made the profilepage pull from Mongo's Database.

**Michael Feuerstein:** Added in database functionality for server/src/server.js. Redesigned classpage to pull from mongoDB. Modified itemInfo function to pull from database. Redesigned the search route for classes. Assisted in redesigning search functionality to pull from database. Worked to debug search issues. Helped compose the submission document. Helped debug

submission server function. Revised submission form to add the item's ID to the user selling list. Edited submission form to allow images (of small size) to be uploaded.

**Yi Fung:** Pair programmed with Mike. Redesigned the search route for searchpages and made the search result page pull from mongoDB. Helped compose submission report.
